LAZYWIFI V1.0

SOFTWARE INFORMATION:

NAME :	**lazywifi v1.0**
DEVELOPERS:	**rishabh sharma**
VIRUS SCAN:	**0/47**
LICENCE/PRISE:	**0$**
OS:	**kali linux (recommended) , backtrack**
SIZE:	**55.8kb (compressed)**
LANGUAGE:	**python**

hello friends, I made this script for my own use but I am sharing it with you .. I made it because I am very lazy person..when I start wifi hacking sometime I forget command sometime I forget way of hacking then I search tutorials in my harddisk which is very irritating...so I made this script for lazy peoples..... HOPE YOU ALL LIKE IT....
I add more feature in second version of this script ..and I am not professional developer.......

HOW TO USE THIS SCRIPT:

1. copy lazywifi folder in the root directory.
2. make both script in the folder exutable. Chmod +x filename
3. hs is a folder which make automatically when handshake save. handshake save in this folder. I give you my wifi (IRIS402_46-91-DB-7A-CC-45_1.cap) handshake that help you to understand when you first run this script.the password of my handshake is 11111111.
4. after handshake save use your bruteforce method..
5. happy hacking :)

NOTE:
when u start bruteforce this line come
.cap file name which is in hs folder :

it mean you rightclick on the handshake file which you want to hack and copy full name like this IRIS402_46-91-DB-7A-CC-45_1.cap and this also come

bssid to hack :

so bssid is 46:91:DB:7A:CC:45 for my handshake.

And for dictionary attack you have to give full path of wordlist.

Thank you...
rishabh sharma
happy hacking :)
